UVTripPlanner Now Pre-Loaded On ADR Electronic Flight Bags

Houston, Texas (March 12, 2007) –Advanced Data Research, Inc. (ADR) has selected Universal Weather and Aviation, Inc.’s new electronic flight bag (EFB) version of *UVTripPlanner*sm to be preloaded on all new ADR electronic flight bag shipments in 2007.

“As the creator of the first commercially-based electronic flight bag, ADR strives to remain on the forefront of innovation. The powerful database and interactive tools of *UVTripPlanner*sm help us reach that goal,” said ADR’s Vice President of Business Development, Jeff Geraci. “This is the first phase of an ongoing relationship, with more enhancements to come.”

Jon Sorensen, Product Manager, Universal[®] Technology Products and Services, said that the EFB version of *UVTripPlanner*sm – a comprehensive trip reference tool that Universal[®] compiles from a vast collection of data into a convenient, hands-on print, CD-ROM and online pre-flight planning resource – was designed with the pilot’s needs in mind.

“We designed the EFB version of *UVTripPlanner*sm for ease-of-use both in the cockpit and out,” said Sorensen. “Although not a certified in-flight reference, when mounted in the cockpit, it has the dynamic capability to display in portrait mode, providing airport and ground service information at your fingertips with simple touch-screen functionality. It can also be used outside the aircraft in landscape form for Windows^{®i} presentation.”

The EFB version of *UVTripPlanner*sm offers features and information never before available to trip planners, including a massive database far larger than possible in a print reference and interactive search tools. Features include:

- Opportunity to subscribe to regular data updates via CD-ROM (approximately every 28 days)
- Ability to print Adobe^{®ii} PDF documents
- Advanced Search, Alternate Airports and Navigation Calculation functionality
- Map function powered by MapQuest^{®iii}
- Identification of UVair[®] contract fuel locations
- 25,816 airports, heliports and seaplane bases worldwide
- 24,528 runways and helipads to support landing facilities
- 8,930 FBOs/handlers worldwide with supporting ground services information
- 16,731 hotels worldwide
- 2,167 catering provider listings worldwide
- 8,253 transportation provider listings worldwide
- More than 1,050 airport diagrams with FBO/handler locations on the airport

“We are excited to be working with ADR, the number-one producer of electronic flight bags, which will introduce *UVTripPlanner*sm to a new market segment,” said Randy Stephens, Director of Product Management. “Those who have already purchased an electronic flight bag from ADR are not excluded and will still have access to *UVTripPlanner*sm via CD-ROM. We will be providing the ‘EFB-ready’ version of *UVTripPlanner*sm to ADR for shipment to their existing EFB users.”

*UVTripPlanner*sm is a comprehensive trip reference tool that Universal[®] compiles from a vast collection of data into a convenient, hands-on, print, CD-ROM and online pre-flight planning resource. The highly regarded *UVTripPlanner*sm print reference has set the standard for trip planning guides for many years and the soon-to-launch subscription-based, “real-time” online version.

For more information on any edition of the 2007 *UVTripPlanner*sm, visit uvtripplanner.com or e-mail uvtripplanner@universalweather.com.
